NEW ADD LISTING

A modern, native add listing flow, built around the data buyers really need.

Khalid Rami · Product Manager

Project Overview

We rebuilt add listing from scratch on web and native apps, to make posting faster and to capture the payment data buyers rely on.

My role Product Manager	Users Brokers & private owners
Platforms Web · iOS · Android	Timeline 2025 - 2026

WHAT WE SHIPPED

- A native, 5-step flow
- AI title and description
- Payment data and amenities
- Pay as you go for private owners

The Problem

The old add listing was slow to use and hard to change.

Slow to post
10+ 10 min to add one listing

Legacy code
No room to add the new features we needed

Legacy design
It is outdated, hard to follow experience

Web view in the apps
Not a native, smooth mobile experience

Private owners paid for a package to post one listing
Our top complaint from website users: they bought a points package, then couldn't use or redeem the rest of their points.

Led to pay as you go →

How It Started

Every competitor already showed buyers how to pay. We didn't, so we were behind the market on the basics buyers ask about first.

- Competitive analysis
- NPS calls
- Issues from website users

Buyers couldn't rely on our property data
Is it available on installments? How much down payment? How much per month?

Goal
A modern, usable and seamless add listing

Every competitor had these. Our listings didn't.

WHAT BUYERS ASK	COMPETITORS	AQARMAP, BEFORE
Down payment	Available	Missing
Instalment years	Available	Missing
Monthly instalment	Available	Missing
Rent duration	Available	Missing

The New Flow

Five clear steps on web and native apps. Only a verified phone number is needed to start.

Logged in with a verified phone number

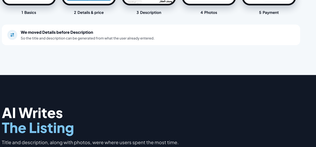

Basics
Section, location search with map, property type

Details & price
Fields that fit the property type, price and amenities

Description
Title and description, auto-generated in both languages

Photos
Upload, review, reorder, main photo, captions, video

Payment
Free, points or a package, then review

1 Basics · 2 Details & price · 3 Description · 4 Photos · 5 Payment

We moved Details before Description
So the title and description can be generated from what the user already entered.

AI Writes The Listing

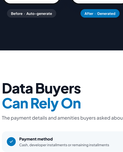

Title and description, along with photos, were where users spent the most time. So we built an AI that writes them for the user.

WHERE USERS SPENT THE MOST TIME: Title · now written by AI · Description · now written by AI · Photos

TRAINED ON OUR OWN LISTINGS
It learned from the titles and descriptions users already wrote on Aqarmap, so it writes the way they do.

BUILT FROM WHAT THE USER ENTERED

Property type · Location · Area · Rooms · Finishing · Payment method · Price · Amenities

Before · Auto-generate · After · Generated

Ready to edit and publish

Listing title
A clear headline that shows on every search result.

Description
Full property description, written in seconds instead of from scratch.

Still the user's call
Every generated line can be edited before moving on.

Data Buyers Can Rely On

The payment details and amenities buyers asked about, now captured in the details step.

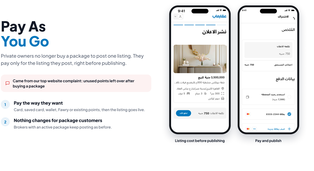

- **Payment method**
  Cash, developer installments or remaining installments
- **Down payment toggle**
  For developer installments, as a % or an amount, at least 1% of the price
- **Instalment period**
  Remaining installments in years or months, from 1 to 40 months
- **Payment summary**
  Full price, down payment, remaining amount, period and monthly instalment
- **Amenities**
  Picked from a set list, so every listing shows them the same way and buyers can filter by them

Payment summary

What the buyer finally sees	
Full price	100%
Down payment	10%
Remaining amount	90%
Instalment period	8 years
Monthly instalment	Calculated

Example values

From the add listing form to what buyers see

Owner adds the payment plan · Buyer sees instalment details · Buyer filters by down payment · Owner picks amenities · Buyer sees amenities

Faster by Design

Less typing, fewer questions, and no dead ends.

Auto-generate
Title and description written for you, in Arabic and English

Smart fields
Rooms, baths, floor and finish only appear when they fit the property type

Cloning built in
Clone comparable data and units, including payment plans

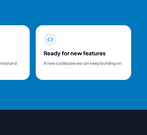

Missing location?
Request a new location right from the search

Pay As You Go

Private owners no longer buy a package to post one listing. They pay only for the listing they post, right before publishing.

Came from our top website complaint: unused points left over after buying a package

1. **Pay the way they want**
   Card, Vodafone Cash, wallet, Fawry or existing points, then the listing goes live.
2. **Nothing changes for package customers**
   Brokers with an active package keep posting as before.

Listing cost before publishing · Pay and publish

How We Rolled It Out

Jan 2025	Feb – Apr 2025	Apr – Aug 2025	Jun – Feb 2026	Jan – Mar 2026	May – Jul 2026
New flow on web	**Native apps**	**Smarter flow**	**Amenities**	**Payment data**	**Pay as you go**
Basics, details, description	Replacing the web view on iOS and Android	Auto-generate and the step swap	Picked in add listing, shown on details, filterable in search	Payment step, instalments, down payment and new search filters	Pay for a single listing inside the add listing, no package needed

The Outcome

Native on every platform
No more web view in the apps

Richer listing data
Payment details, instalment period and amenities

Ready for new features
A new codebase we can keep building on
