CSA ACADEMY

Rebuilding a one-teacher, one-year platform so it can grow into an EdTech marketplace.

Khalid Ram · Project Manager

Project Overview

CSA Academy is Mr. Ashraf El-Shenawy's chemistry platform. It was built for one teacher and one school year. He now teaches four school years and plans to bring in more teachers, so we rebuilt it to scale.

My role **Project Manager · Freelance**	Team **4 people, fully remote**
Platforms **Web · Mobile web · Admin**	Timeline **Dec 2025 – Jun 2026**

Live at coacademyone.com

BUSINESS OBJECTIVES

- Serve every school year in one platform
- Recorded lectures, quizzes and exams
- Ready to onboard more teachers
- Educational centres, digitally
- A path to a full EdTech marketplace

What I Owned

I partnered directly with the founder, leading the product from concept validation to roadmap and delivery.

Discover
- Product discovery
- Stakeholder workshops
- Business analysis
- Competitive analysis

Define
- User flows
- Information architecture
- Interactive prototyping
- MVP and roadmap

Architect
- Admin dashboard planning
- Backend structure
- Operational modeling
- Information design

Deliver
- Delivery coordination
- Engineering collaboration
- Testing support
- Stakeholder handover

The Problem

The platform was designed around a single teacher and a single school year. That stopped fitting the business.

BUILT FOR
1 teacher
Year 1
1 school year

TODAY
1 teacher
Year 1 · Year 2 · Year 3 · Year 4
4 school years

NEXT
+ More teachers
Year 1 · Year 2 · Year 3 · Year 4 · +1
Many school years

Pains we found while validating the need for an online educational center

Before building, we checked if students, teachers and centers really needed to move online. These pains confirmed it.

Students
- Time wasted commuting to centers
- High cost of lessons and transport
- Fixed class schedules
- Missed lessons hard to recover
- Hard to compare teachers
- Little progress tracking

Teachers
- Limited reach beyond local centers
- No place to showcase their content
- Manual student and subscription work

Educational centers
- Manual registration and code distribution
- Weak tracking of code sales
- Heavy offline admin work
- Hard to scale across teachers

THE OPPORTUNITY
Rebuild CSA Academy around school years and teachers, so it can serve all four years today and open up to more teachers as a marketplace.

Market Research

I bench-tested the top EdTech platforms in Egypt and the Middle East to map conventions, gaps and pricing models.

Benchmarked · Tutlimy · Sahl · Nagwa · Ekhlela · Authur · Alrawdh

What we learned

- Users browse content before signing up
- Choosing the teacher drives the decision
- Free intro lessons build trust before buying
- Recorded content is the main format
- OTP registration is the norm
- Dashboards and progress tracking are expected
- Arabic-first experiences lead the market
- Fawry and digital wallets are widely used

Prototype First

Along the way, I built a prototype to show stakeholders what we had reached so far, so everyone could see it, react early and stay aligned.

- Confirmed the business requirements
- Aligned everyone on one vision
- Surfaced missing requirements early

MVP Roadmap

Phased releases, from the foundation to the MVP launch in March 2026.

JAN 2026 — Foundation
- Registration and login
- Homepage
- Lectures
- Question bank
- Quizzes
- Homework

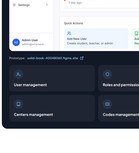
FEB 2026 — Expansion
- Exams
- Files
- Top students
- Clarifying videos
- Centers management

MAR 2026 — MVP Launch
- Student account
- Daily missions
- Testing and maintenance

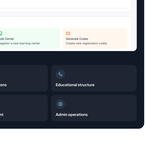
APR – JUN 2026 — Later
- Parent dashboard
- Student wallet
- Store integrations

What We Built

Everything is organized by school year, so lectures, exams, files and the store scale with every new year and teacher.

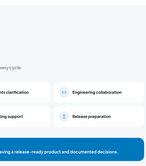


Pick your system first
Students choose their education system, then see only their year

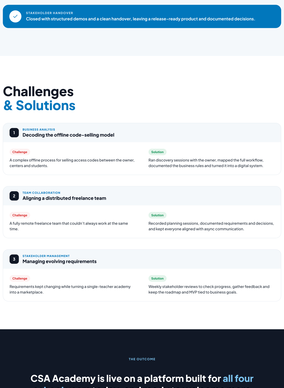


Lectures by status
In progress, not started and finished, with time left and access

Exams
Start, continue or review answers for each exam



Lecture content · **Exam on mobile**



Through Delivery

My role went past design. I stayed involved across the whole delivery cycle.

- Sprint planning
- Requirements clarification
- Engineering collaboration
- Feature validation
- QA and testing support
- Release preparation

STAKEHOLDER HANDOVER
Closed with structured demos and a clean handover, leaving a release-ready product and documented decisions.

Challenges & Solutions

1 · BUSINESS ANALYSIS
Decoding the offline code-selling model

Challenge
A complex offline process for selling access codes between the owner, centers and students.

Solution
Run discovery sessions with the owner, mapped the full workflow, documented the business rules and turned it into a digital system.

2 · TEAM COLLABORATION
Aligning a distributed freelance team

Challenge
A fully remote freelance team that couldn't always work at the same time.

Solution
Recorded planning sessions, documented requirements and decisions, and kept everyone aligned with async communication.

3 · STAKEHOLDER MANAGEMENT
Managing evolving requirements

Challenge
Requirements kept changing while turning a single-teacher academy into a marketplace.

Solution
Weekly stakeholder reviews to check progress, gather feedback and keep the roadmap and MVP tied to business goals.

THE OUTCOME

CSA Academy is live on a platform built for all four school years today, and ready to welcome more teachers as a marketplace.
