LEAD QUALITY

Fewer fake, broker and duplicate leads, so brokers spend time on real buyers.

Project Overview

Brokers pay for leads, but many leads were not real buyers. We found the three biggest sources of bad leads and fixed each one at the source.

My role **Product Manager**	Users **Brokers & home seekers**
Platforms **Web · iOS · Android**	Timeline **2023 – 2025**

What Makes Us Different

Most platforms tell brokers how many leads they got. We give them the people behind the leads.

Other platforms

128

leads this month

A number, no names, no way to call back.

Aqarmap

- **Sara Kamal** +20 100 •••• 412 ✓ Verified
- **Omar Adel** +20 122 •••• 908 ✓ Verified
- **Mona Fathy** +20 111 •••• 230 ✓ Verified
- **Youssef Nabil** +20 101 •••• 775 ✓ Verified

Every lead comes with a name and a verified phone number.

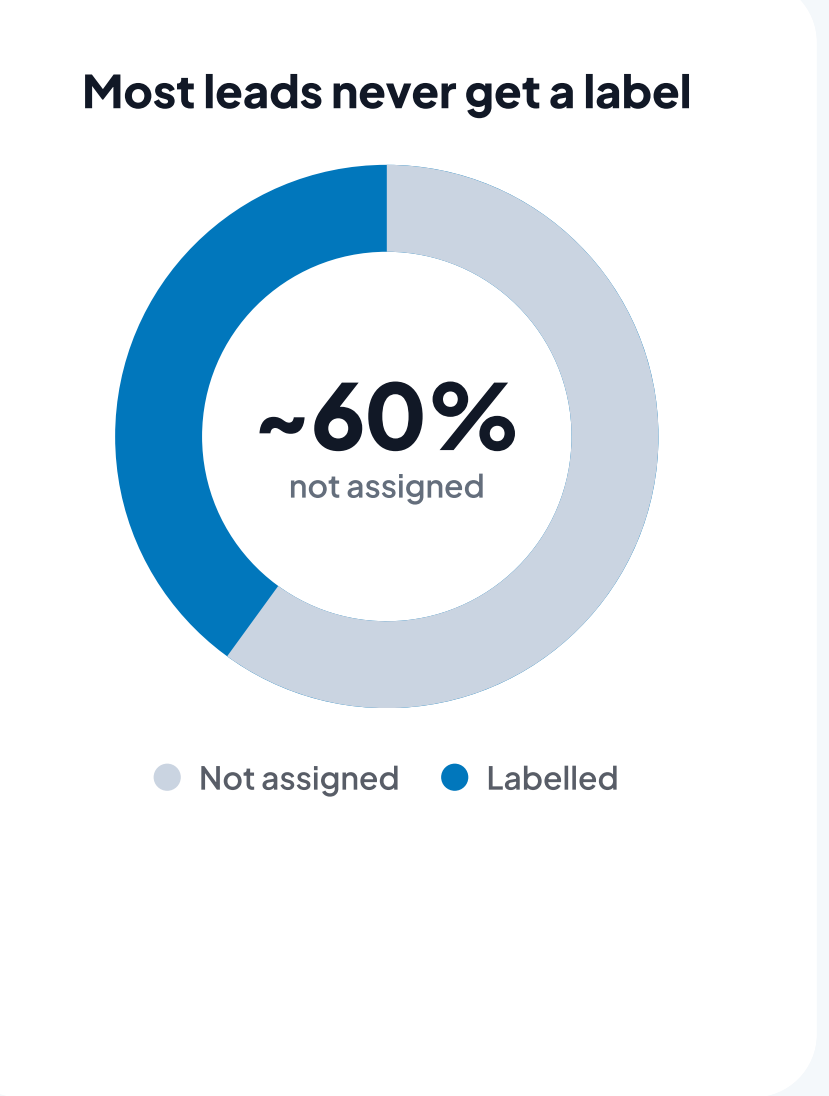
That is why lead quality matters so much for us: a wrong number or a fake lead is something the broker actually calls.

Understanding the Problem

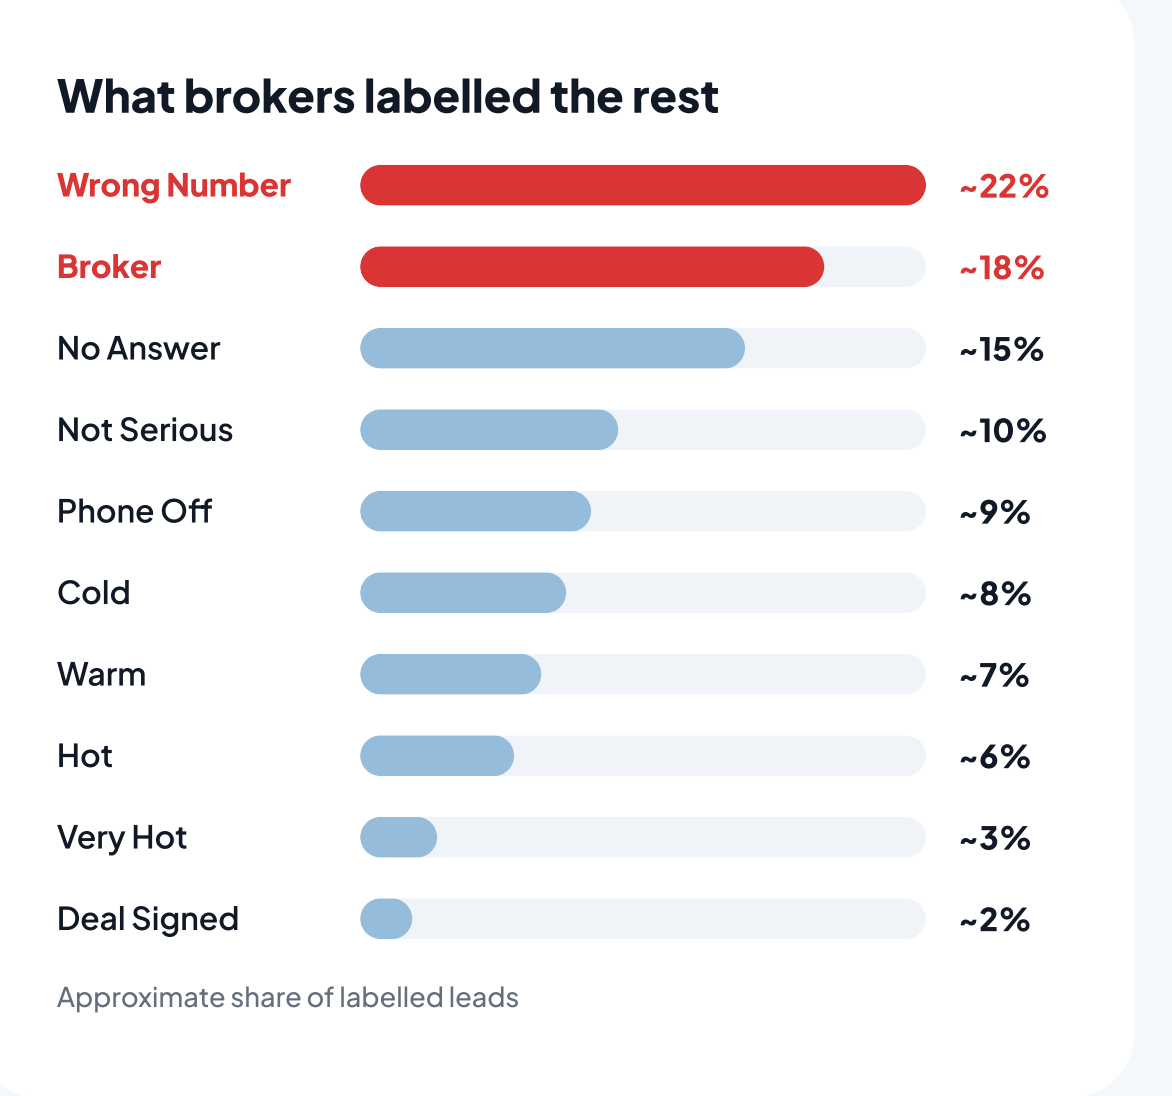
Brokers kept telling us their leads were not real buyers, so we went to the data.

- Listened to broker complaints
- Analysed the labels brokers put on leads
- Called leads to validate the labels

Most leads never get a label



What brokers labelled the rest



Approximate share of labelled leads

~30%

of leads were duplicates, the same user on the same listing or seller

Three causes behind most bad leads: wrong numbers, brokers and duplicates.

Validated by calling the leads, not just trusting the labels.

Problem & Solution

Wrong numbers

Anyone could type any number to see the seller's phone.

→ **OTP verification**

The lead's phone is verified by a one-time code before the seller's number is shown.

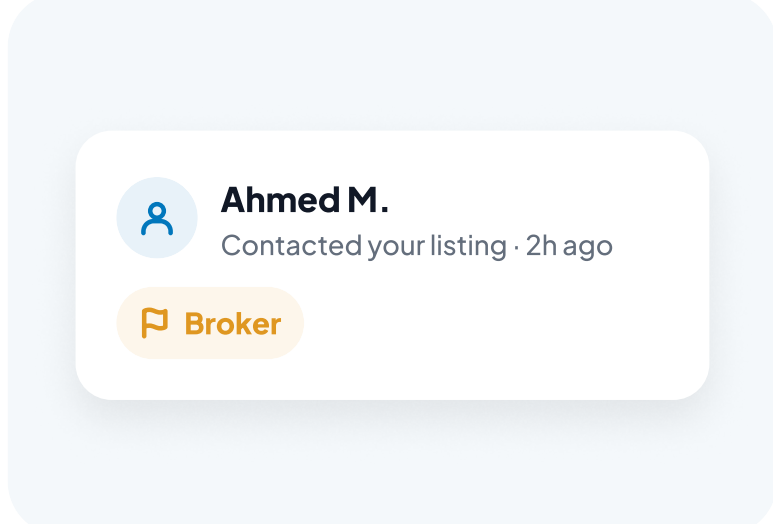
Brokers posing as buyers

Brokers contacted other brokers' listings, wasting real sellers' time.

→ **Broker flag**

Leads from users with an active broker, company or developer package are flagged "Broker" in the dashboard, AML and lead email.



Ahmed M.
Contacted your listing · 2h ago
Broker

Duplicate leads

~30% of leads came from the same user on the same listing or seller.

→ **Duplicate flag**

Only the first lead counts. Repeats are recorded with a duplicate flag, not as new leads.

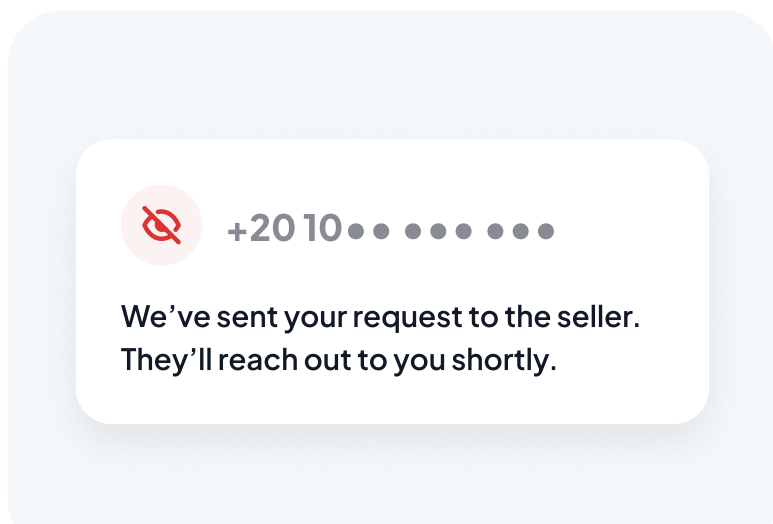
Duplicate

Scrapers harvesting numbers

Bots generated leads at scale just to collect sellers' phone numbers.

→ **Scraper detection**

Suspicious users never see the seller's real number. They get "The seller will contact you" instead.



+20 10•• ••• •••

We've sent your request to the seller. They'll reach out to you shortly.

Lead Detection Model

Every new lead is checked against business conditions before it reaches the broker.

1 **Scraper**

- IF Calls more than 4 listings within 1 minute
- OR
- IF User is already marked as a scraper

↓

2 **Broker**

- IF Lead creator has an active package
- AND
- IF Package type is Freelance, Brokerage company or Compound developer

↓

3 **Duplicate**

- IF Same user, same lead type, same listing, same session
- OR
- IF Same user, different lead types, same listing or same seller

↓

Matched any condition

Soft-deleted lead

- The seller's real number is never shown, so scrapers can't take it
- The user sees a message instead
- The broker sees it marked suspicious, and it is not counted

"We've sent your request to the seller. They'll contact you shortly."

Passed every condition

Real lead

- The user gets the seller's number
- The broker gets the lead with a name and a verified phone

The OTP Challenge

OTP raises quality, but we expected it to cut leads. The goal: keep lead volume at least where it was.

1 Jan

Before OTP

25% without data

The starting point

2 Feb 6

OTP + 3 free leads per session

65% leads without data

Users skipping the phone still got the number 3 times

3 Feb 27

Free leads removed

−46% lead volume

Quality jumped, but brokers felt the drop

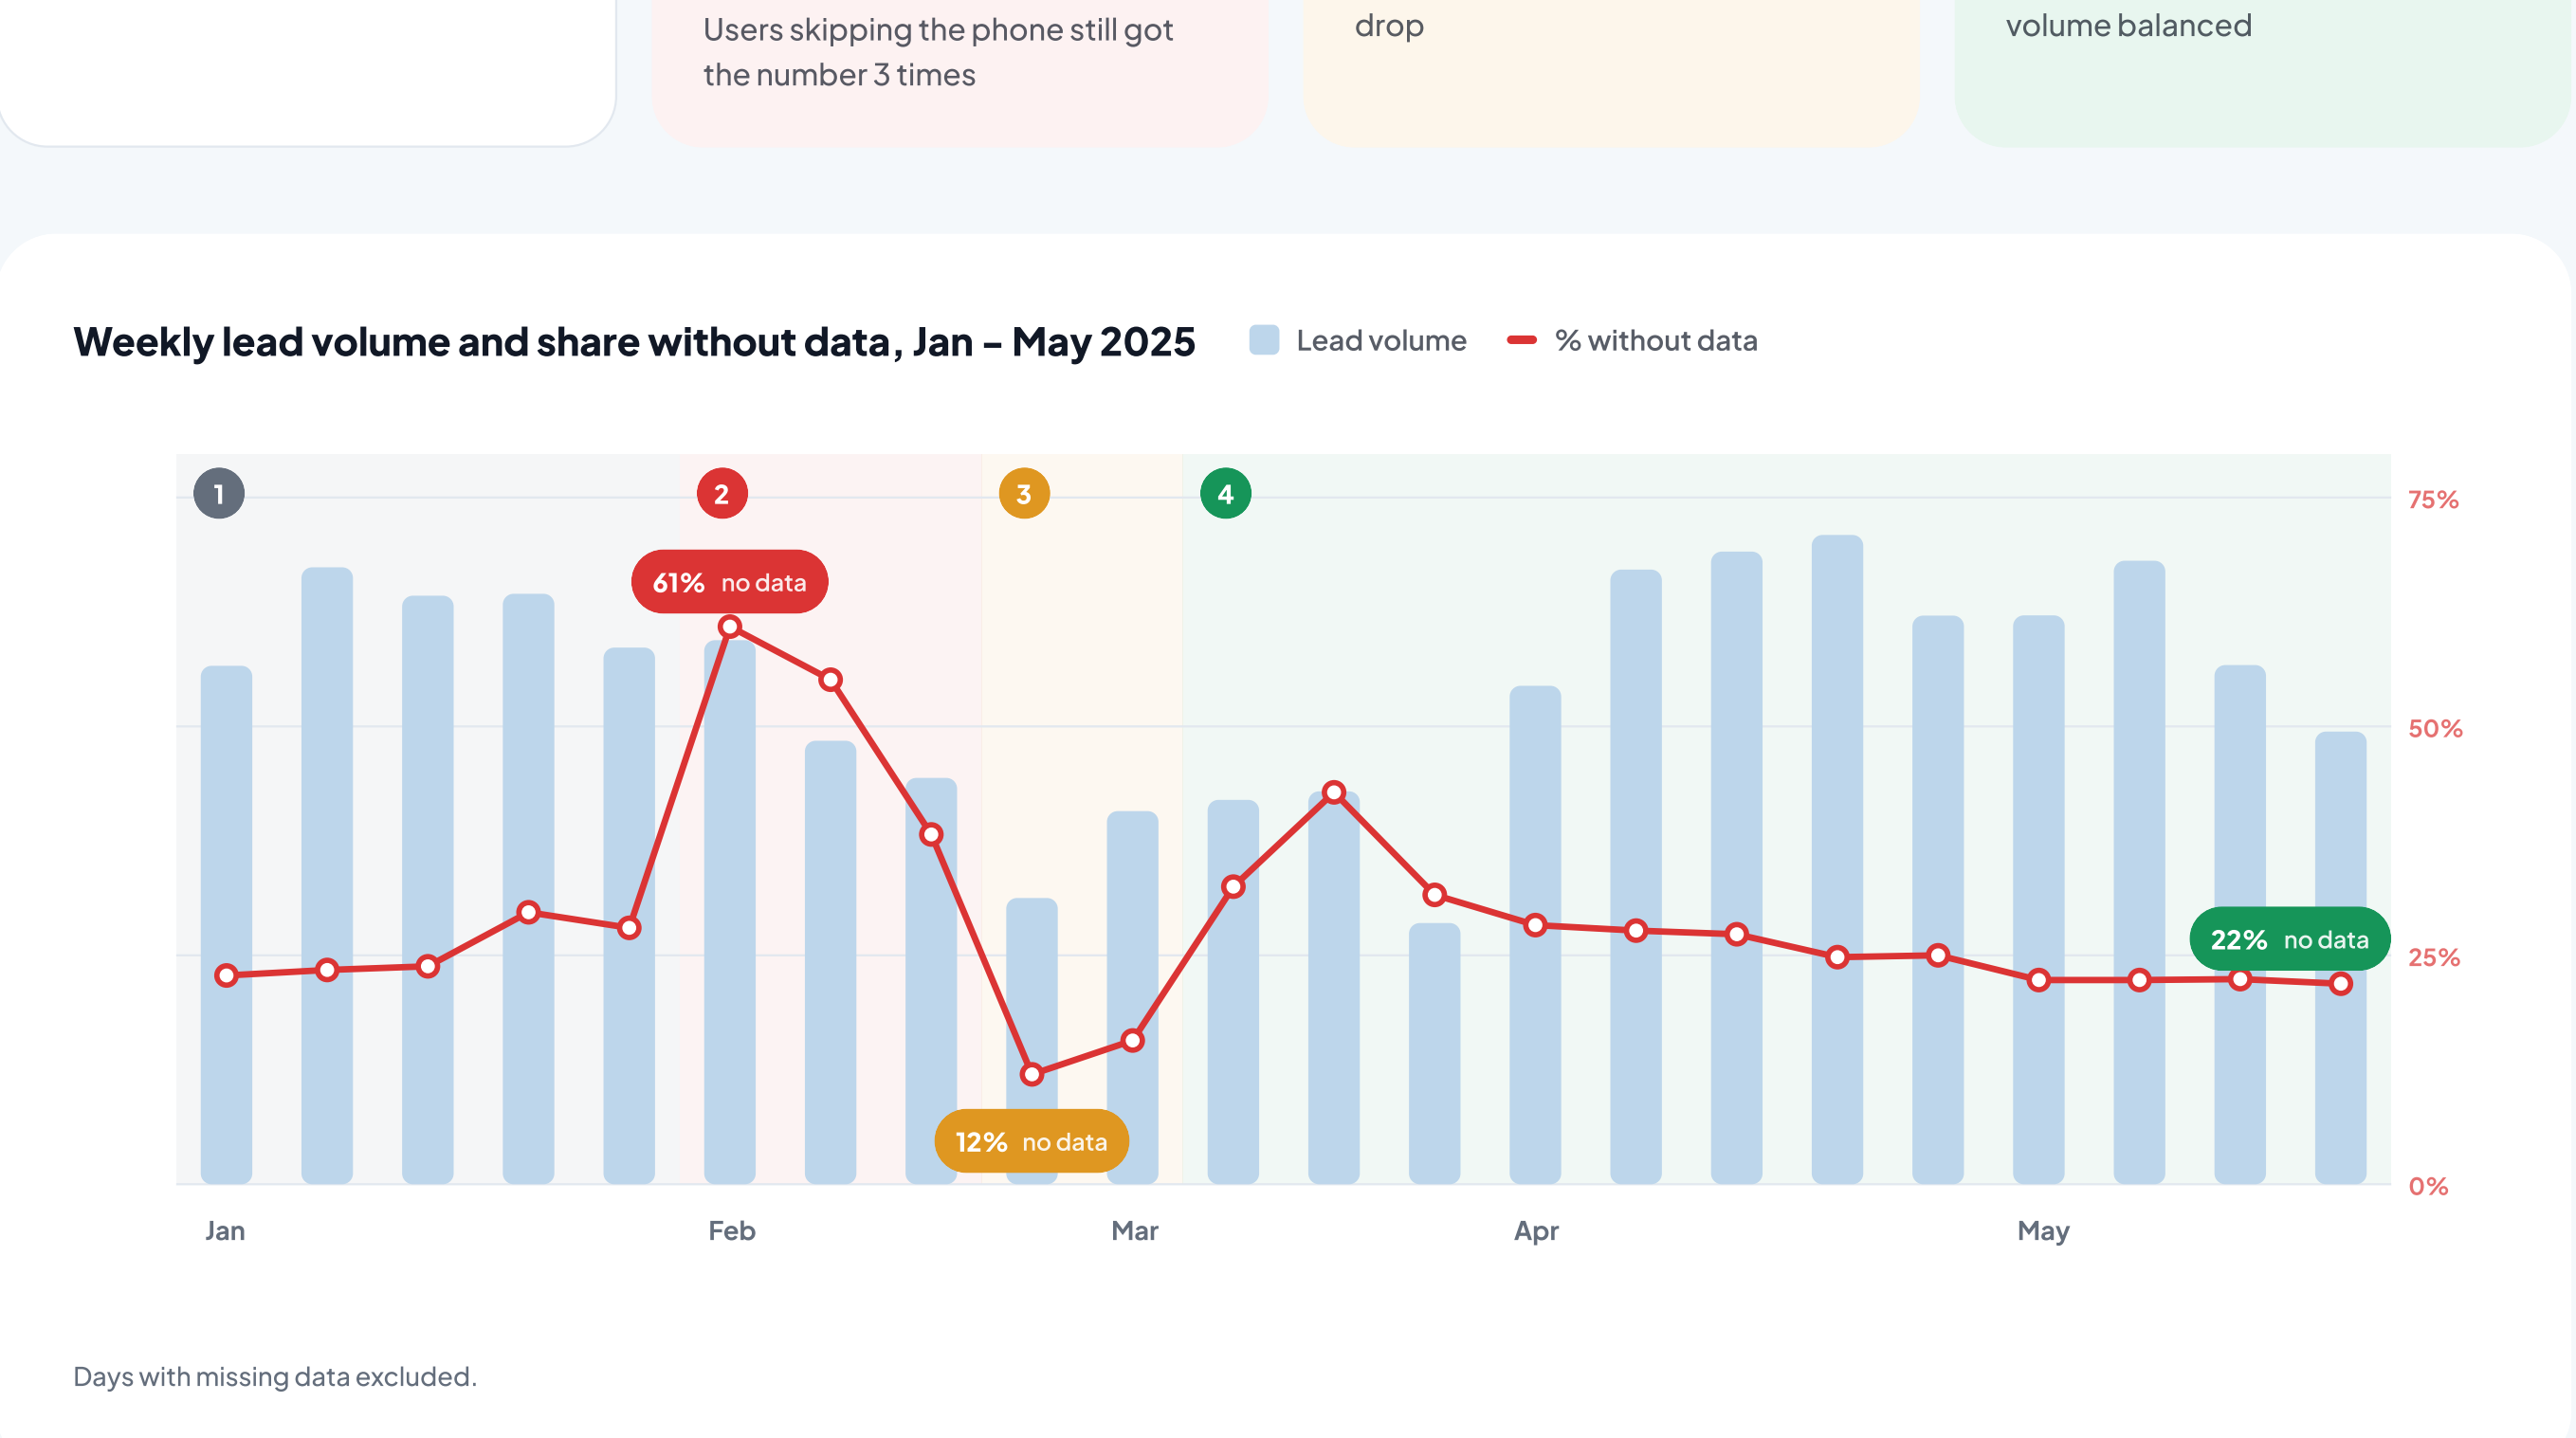
4 Mar 10

1 free lead per session

~97% volume back

22% without data, quality and volume balanced

Weekly lead volume and share without data, Jan – May 2025



Days with missing data excluded.

One free lead per session kept everyone satisfied.

Brokers got their usual lead volume back, users who refuse to share a phone still get one try, and the detection model keeps suspicious leads out of the count.

User Flow

Home seeker · getting the seller's number

Tap "Show number" → Enter phone number → Enter OTP code → Name & email (first time only) → Seller's number shown

The Impact

~97%

of lead volume kept after adding OTP

1 in 4

leads caught by the detection model and soft-deleted, not counted for brokers

90%

of 10 randomly called customers were satisfied with lead quality

~0%

wrong or fake number labels, down from ~22%

Company & Sub-account Restructure →
