SUB ACCOUNTS

One company account, the right access for every agent, and a true cost per lead.

Khalid Ram · Product Manager

Project Overview

Brokerage companies run one main account with many agents as sub accounts. We rebuilt how they share listings, leads and points, and how much each agent can see.

My role
Product Manager

Users
Brokerage companies

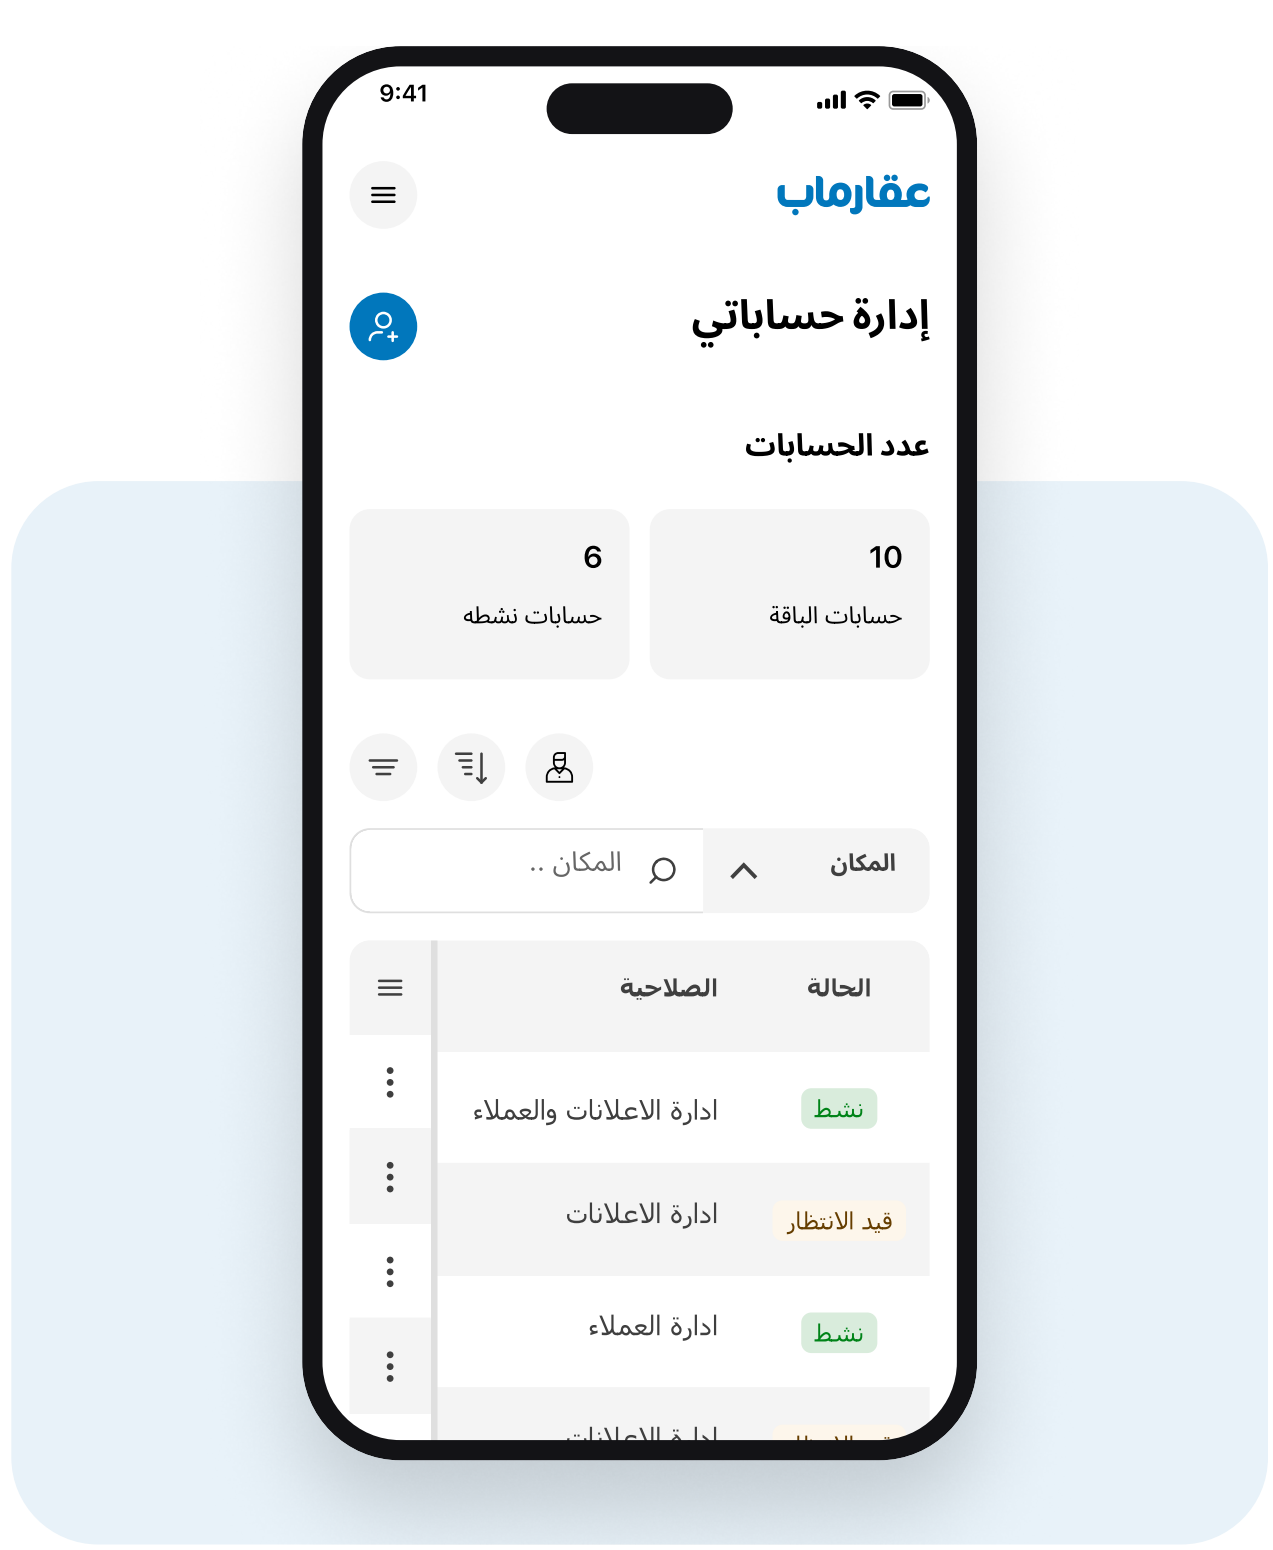
Timeline
2 phases



How It Worked Before

The main account paid and got all the points, then transferred them to each sub account by hand.

Main account

- Listings
- Leads
- Points

Gets charged and receives all the points

Transfers points →

View only

Sub account

- Listings
- Leads
- Points

Spends transferred points and owns what it publishes

All or nothing access
No way to give a sub account access to specific pages of the dashboard.

Leads exposed
Most brokers didn't want agents to see the leads section at all.

Data walks out the door
When an agent left, their listings and leads left with them.

Cost per lead was wrong
The main account paid, the sub listed and got leads, so CPL couldn't be tracked.

Phase 1
One Company, Clear Access

The main account owns everything. Sub accounts work with the access they are given.

Main account owns

- All listings
- All leads
- All points

Sub accounts are saved as the publisher of what they post.

Agent A	Manage Listings
Agent B	Manage Leads
Agent C	Listings & Leads

All or nothing access → **Permissions per sub account**
Manage Listings, Manage Leads, or both. Picked when inviting, changeable any time.

Leads exposed → **Leads only if allowed**
A sub account sees only the leads of listings it published, and only with Manage Leads.

Data walks out the door → **Main account owns everything**
Remove an agent and their listings and leads stay with the company.

Cost per lead was wrong → **One wallet, true CPL**
Subs use the main account's points, so CPL counts all points and all leads.

Who Sees What

Access is set per sub account, so each agent sees only the parts of the dashboard they need.

	Main account	Manage Listings	Manage Leads	Listings & Leads
Add & feature listings with main points	✓	✓	×	✓
See leads of own listings	✓	×	✓	✓
See all company listings & leads	✓	×	×	×
Invite, edit & remove sub accounts	✓	×	×	×
Buy packages & manage points	✓	×	×	×

Go-to-Market for Existing Customers

Changing who owns points and listings affects every company already on Aqarmap, so we launched it together with Operations and CS.

Customer Success

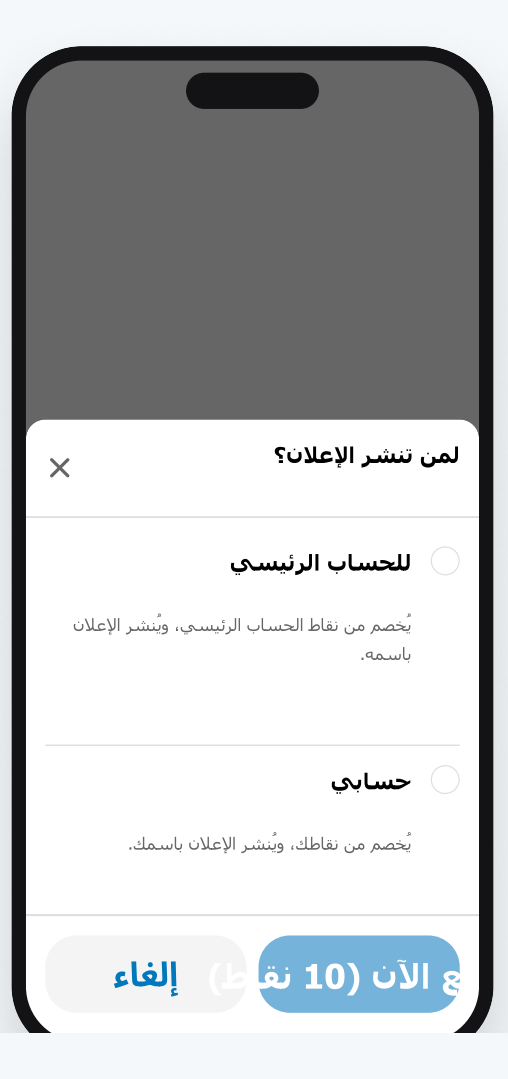
- ✓ Told existing customers about the new package structure
- ✓ Followed up on every complaint after 10 and 30 days

Operations

- ✓ Changed how packages are charged to brokers
- ✓ Transferred sub accounts' points to the main account

Product

- ✓ Gave old pending listings a payment choice
- ✓ Clear rules when a sub account has no points



لمن تنشر الإعلان؟
للحساب الرئيسي
يُخصم من نقاط الحساب الرئيسي، ويُنشر الإعلان باسمه.

Old pending listings: who pays?

Listings a sub account created before the change still belonged to it. When paying, the broker chooses the account.

Main account
Points are deducted from the main account

Sub account
Points are deducted from what the sub account has left

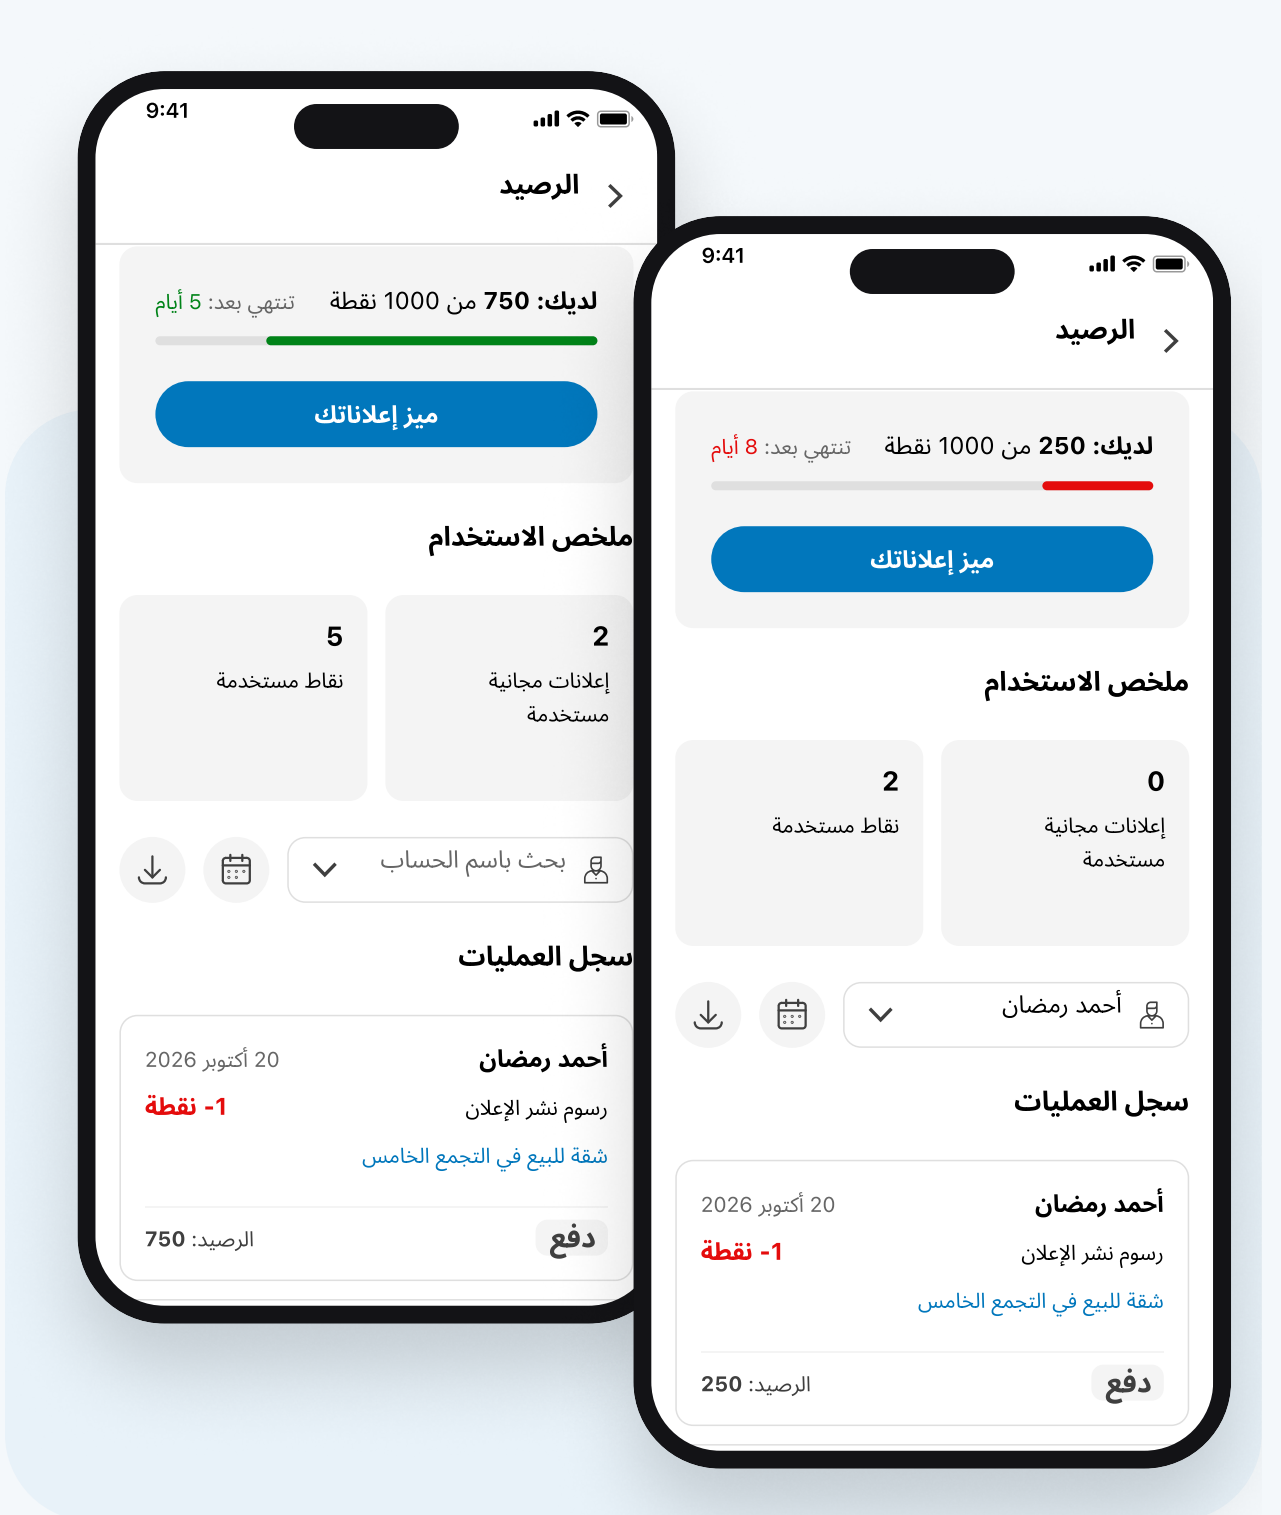
Not enough points
The sub account option is disabled, with the reason shown

After launch, we stayed with CS until every issue was closed

Launch — New structure live → **Day 10** — CS follow-up on every complaint → **Day 30** — Second follow-up → **Done** — All problems solved

Phase 2
Shared Points, Full Visibility

With one wallet for the whole company, main accounts needed to see where the points go.



My balance page
Every point used, by which account, on which listing.

Balance health at a glance
Remaining points turn green, orange or red as they run out.

Filter by sub account and date
See what each agent spent in any period.

Broker app shared with subs
Sub accounts inherit the main account's app service with the same expiry date.

Publisher on every listing and lead
The main account sees who published each listing and who received each lead.

User Flow

Main account · adding an agent

Manage accounts → Add sub account email → Choose permissions → Agent accepts the invite → Agent works with main points

Main account · when an agent leaves

Manage accounts → Remove sub account → Listings & leads stay → Publisher becomes the main account → Agent loses access

The Outcome

Nothing leaves with an agent
Listings and leads always stay with the company

A true cost per lead
CPL counts every point and every lead in the company

Agents see only what they should
Leads stay private unless the main account allows it

What's Next

This structure opened a new direction for the business. The company announced a new price list with unlimited sub accounts in every package.

Unlimited
sub accounts in all packages
